# INTRODUCTION

The 1982 edition of the Alaska Vital Statistics Annual Report is a statistical summary of vital events for calendar year 1982. Data relating to population, births, deaths, marriages, divorces, and adoptions are included. Most of the data in this report refer to Alaska residents. Some events, however, such as marriages and divorces, are tabulated by place of occurrence rather than by the residence status of the person(s) involved. As a certain number of Alaska residents either deliver babies or die out of state each year, it is necessary to include data obtained from the certificates of other states in any residence tabulations pertaining to Alaska residents. Out-of-state births and deaths are included here in the appropriate tables.

The purpose of this report is twofold: to provide data which can be used as a basis for planning and policy decisions for health and social services agencies; and to provide the citizens of Alaska with information about the vital statistics of their state.

Any additional needs for data or analyses should be directed to the Division of Planning, Department of Health and Social Services. The office will make every attempt to comply with requests for data within the limitation of staff and resources.

# DATA COLLECTION AND DEFINITIONS

## Sources of Data

Information of births, deaths, marriages and divorces, and reports of adoptions occurring in 1982 was compiled from the original documents filed in the Bureau of Vital Statistics, Alaska Department of Health and Social Services, and from transcripts of original certificates filed in other states but affecting Alaska residents. In 1982 there were 161 out-of-state births and 118 out-of-state deaths recorded. The data on fetal deaths are not available for statistical purposes.

## Population

The population data presented are from the Alaska Population Overview, 1982, prepared by the State of Alaska, Department of Labor, Research and Analysis Section. These are estimates of Alaska's population as of July 1, 1982, and are not, in most cases, census counts. Alaska's 1982 population estimates, reported by census area, are in Table 1.3. Population breakdowns by age, sex, or race for years since the 1980 census were not available at the time of publication.

## Race

The racial categories used in this report are: White, Black, Native, and Other. Native includes Eskimo, Aleut, Indian, Canadian Eskimo and Indian, American Indian (non-Alaskan), and Native Mixed. "Other" includes Asian and Pacific Islander.

## Geographic Classification

Alaska is not divided into counties. Instead, two regional classifications have been used: Census area and Native Regional Corporation (NRC). NRCs are unique to Alaska and are based on the Alaska Native Claims Settlement Act of 1972. Census areas and NRCs are illustrated in Figures 1 and 2. This report uses the 1980 census classification of 23 census areas for most tables. Census areas can be converted to comparable NRCs and Health Systems Agencies (HSAs) by using Tables 1.1 and 1.2.

## Rates

In the interest of expediting the publication of this report, no rates were calculated. However, the necessary data for figuring rates are presented in the various tables in this report. Following are the formulas.

Birth Rate--Number of resident live births divided by total resident population X 1,000

Cause-Specific Rate--Number of deaths due to a specific cause divided by total resident population X 100,000

Death Rate--Number of resident deaths divided by total resident population X 1,000

Divorce Rate--Number of occurrences (divorces and annulments) divided by total resident population X 1,000

Infant Mortality Rate--Number of infant deaths divided by total resident live births X 1,000

Low-Weight Birth Rate--Number of low-weight births divided by total resident live births X 1,000

Marriage Rate--Number of persons married divided by total resident population X 1,000

Neonatal Death Rate--Number of neonatal deaths divided by total resident live births x 1,000

Definitions

Birth Weight--Weight of the fetus or infant at delivery.

Low-Weight Birth--Birth wherein the birth weight is equivalent to 2,500 grams or less (approximately 5 lbs. 8 oz.). 100 grams = 3.5 ounces.

Live Birth--A birth that shows any signs of life after delivery.

Total Births--Total live births.

Infant Death--Death occurring to an individual of less than one year of age.

Neonatal Death--Deaths occurring to an individual of less than 28 days of age.

Occurrence--Place where the event actually occurred.

Residence--The usual place of residence for person to whom event occurred. For births, residence is the mother's usual place of residence; for deaths, residence is that of the decedent.

Race--Race for mother, father, or decedent is as stated on certificate. Race of child is determined from race of the parents.

Underlying Cause of Death--The condition producing the chain of events leading to death.

ICD-9--Ninth Revision of the International Classification of Diseases. ICD-9 has been used since 1979 for the classification of cause-of-death data. By reflecting current disease classification, each revision produces some break in the comparability of cause-of-death statistics. Cause-of-death comparisons between pre-1979 and 1979-1982 data require consideration of these changes.

The totals on each of the tables may not agree because one or more variables may not have been recorded on a given certificate.

Due to reduced funding and staff levels it has not been possible to maintain the quality control measures utilized in previous years' vital statistics reports. Within the limits defined by current resources, every effort has been made to eliminate non-random error in data and to identify anomolous frequencies. However, users should be aware that rates (and predictions) based on small numbers may be questionable due to chance factors and errors in the data base and should be used with caution.

# APPENDIX II

## VITAL EVENTS CERTIFICATES AND LISTS OF VARIABLES

The vital statistics data presented represent only a part of the information reported on the vital events certificates. Other variables not reported in this document for births, deaths, marriages, divorces and annulments, and adoptions, but which can be made available upon user request, are described in this section. Not all categories of information are completed on all certificates. Therefore, frequencies based on infrequently completed categories may represent a non-random sample of the total number of vital events. Tabulations and cross-tabulations of data items can be provided if the cost to the state is not substantial, and the burden on staff and other resources is not unreasonable.
